gitTest

Last week we began to work with the gaming engine unity. As we got more familiar with the engine we started to move 3d objects around our little "game" by implementing code with Microsoft Visual Studios.

access

My Git seems to be accessible and ready.

video1

After watching this first video I understand that we are now trying to see how a game is made in the simplest pipeline we can possibly use.

video2

I understand that mindset is a very important factor when it comes to game development and is crucial to success. This video goes in depth on how a positive mindset can help foster the qualities and encouragement that developers use to think both inside and outside of the box.

video3

This third video goes over building a solid folder structure and why its so important. A simple answer to why its important is to have an easier time managing your project and also looks more inviting to people who see your projects folders wanting to learn more about your game and what you used to make it. When having a more organized set of folders it serves as a navigating system for whoever opens it such as a group member, classmate, or even AI.

video4

As this video goes over Documentation, which is pretty much rough understanding of your game meaning a brief summary including title of the game and its design as well as a game overview just explaining the gameplay, functions, and its targeted audience. This is said to be important because its like reading what you are about to get into. Many major games have used documentations and added them to their page. An example would be GTA V with their page having a trailer and a brief summary of what awaits you in the city of Los Santos.

video5

In video #5 "IntroToUnity" professor goes over how we can skip starting from scratch and use templates because depending on what you want your game to look like it can save you almost hours of work. He also shows how to fix common problems such as decompression issues when downloading templates. Then goes over how to navigate and make changes to your game with it either being adding a new camera perspective or even in games structural changes.

video6

CS110 / INDEPENDENCE ROAD

In video #6 "import custom player" professor goes over how we can change our character to our liking. There are plenty of different downloadable characters under the site mixamo with it just being as easy of just dragging the downloaded file into unity.

opinion

This pipeline can definitely play a huge part in either an already existing or new story because using documentation our game overview is just our entire story summarized and giving a brief idea on what to expect. Also the introduction to character changes is huge because our character or main protagonist can now have distinct physical features that can be recognized throughout the community such as mega mans arm cannon.

questions

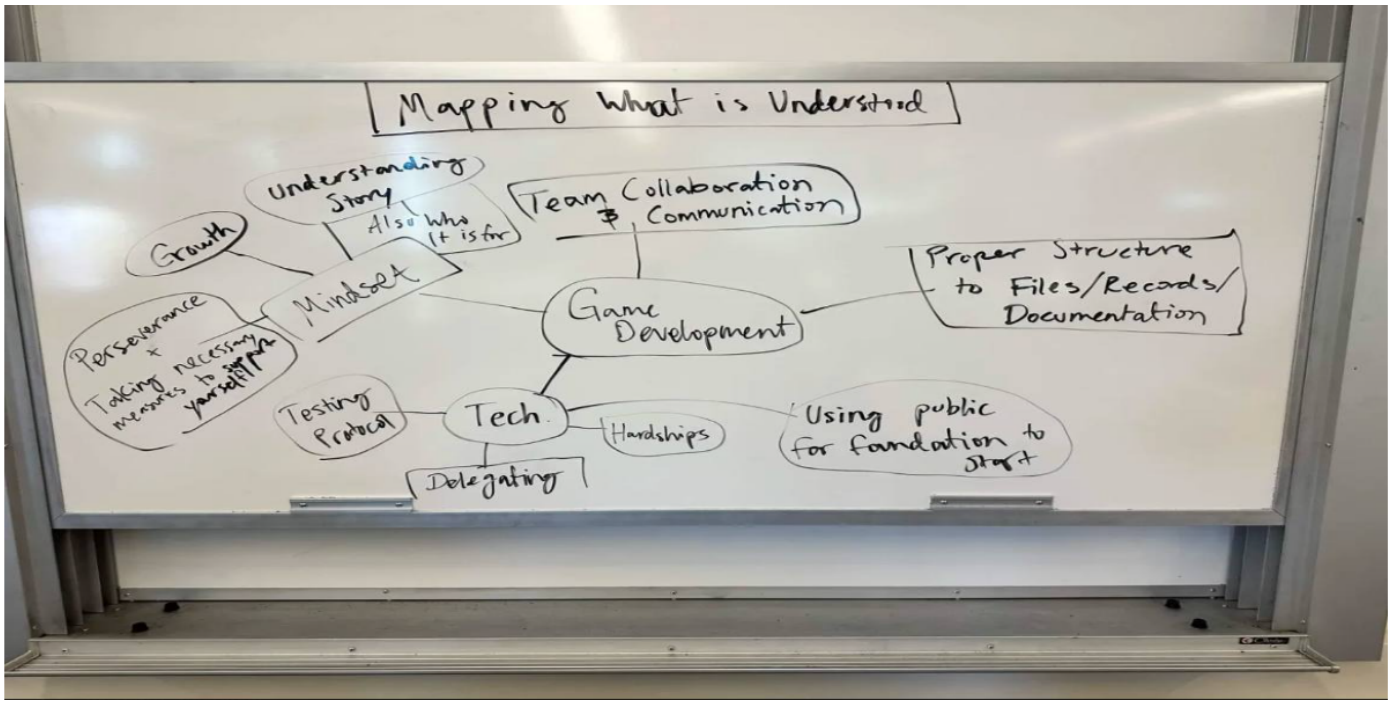

How to change the hitboxes of certain characters?

currentPage

57

Whiteboard

This is brief understanding on what we learnt from the videos 1-6.

pitch

understand

What I understood about today is that we must use all features taught to us in the videos because they will be the difference between a successful and not so successful game.

offer

I feel like I bring to the team another member that can provide information regarding our game or even just someone reliable that can do any task and if I can't I will figure out how to complete it.

limits

Something I still struggle with would be coding on my own instead of having a template or even just copying the code from one place to another.

aiPlan

Name

Claude

task

This AI will help us with mainly coding for our project.

verify

By running different trials to see what may fit the best.

huddle

mission

A 2-D wave-based game with escalating difficulty as the rounds progress. Online/offline, up to 4 players total.

The main goal is to see how far you can get until the enemies overwhelm you and defeat you.

framework

P2P can be advantageous in the development by guiding us to the end point of where our team wants the game to stand. There is not much of a story to derive from this type of game, as opposed to other single-player, story mode games, but an underlying story to the characters can help immersify the fans.

reuse

The whiteboard, storyboarding process can be a concept that is easily transferable across projects and different stories. Understanding every element of the story is what builds and drives the foundation. It guides where the story will and should end.

boardNotes

Black Ops Zombies arcade was the main inspiration for the game. Different enemies, characters, stories and whatnot, but a 2-d wave-based game that increasing in difficulty. The remaining questions revolve around ui and design; what the enemies and characters may look like

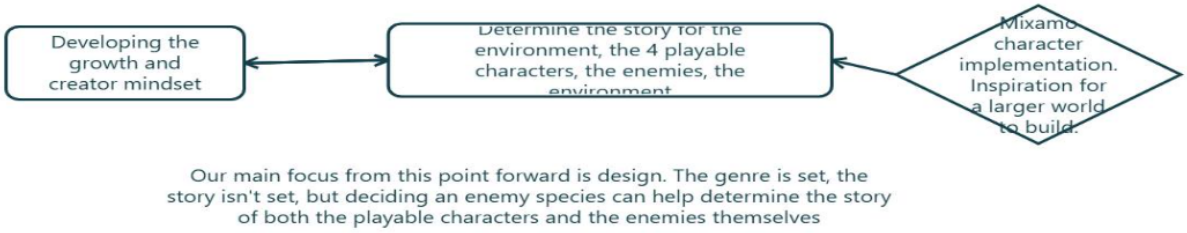

Whiteboard

Focus on design and the story of our characters.

Why are they fighting to survive in this world?

Where even is this world and who the heck are these enemies?

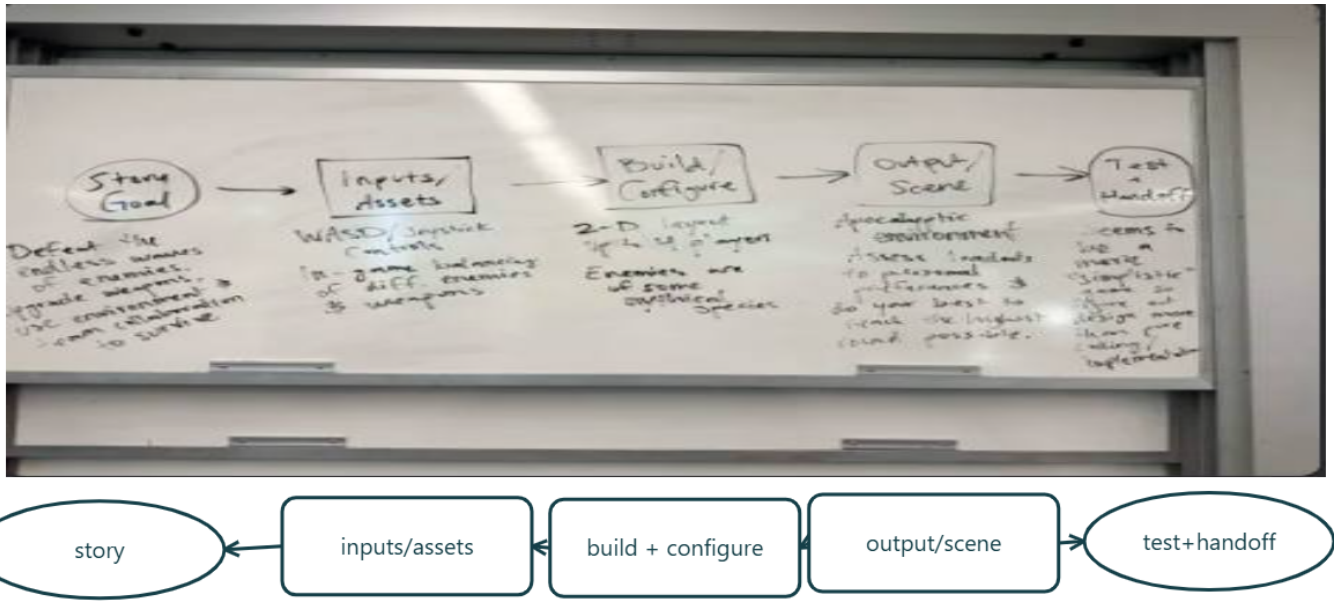

CS110 / INDEPENDENCE ROAD

Our main focus from this point forward is design. The genre is set, the story isn't set, but deciding an enemy species can help determine the story of both the playable characters and the enemies themselves

Whiteboard

Pipeline to get the story to become a reality. Design and being creative with the characters, story, enemies, and weapons should be a main focus.

TEAM-CCDE2CD6BC67F07A25E72EDE

Name

duff

huddle

mission

2D wave based game with enemies getting stronger and larger in numbers the longer you go.

A playable goal would be to progress through a certain path and/or complete certain steps to end the game.

framework

My framework would be P2P.

pipeline

Create Unity Project 2026-11-10T13:30 to 2026-11-10T14:00 Pacific

Make visible changes to environment/map 2026-11-10T13:45 to 2026-11-10T14:45 Pacific

Add main protagonist and the different enemies 2026-11-10T14:45 to 2026-11-10T15:45 Pacific

add health bars to main character and enemies. 2026-11-10T15:45 to 2026-11-10T16:45 Pacific

Test + handoff 2026-11-10T16:45 to 2026-11-10T17:45 Pacific

This is basically what I will do regarding building my game.

tech

Engine: Unity

Some assets I will need is definetely AI service such as Claude for my coding and maybe ChatGPT for any additional changes to the environment or characters.

To get all work done | [ ] | [ ]

reuse

Regarding the story production we can definitely take some inspiration from zombie games springing from Call of Duty such as starting as early as BO1-BO4

boardNotes

Basically the board made previously is somewhat of a guide on what we will prioritize and do before the other things. Some questions that may remain is how we are thinking the story of our game would start and introduce the main character as well as the enemies and how it well all end.

Whiteboard

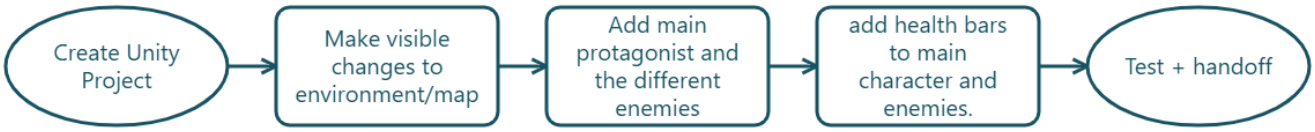

Obviously I will work on everything listed on the board but maybe as time goes on I might find new recruits who like my idea and want to help me pursue it so the state of who does what may vary.

CS110 / INDEPENDENCE ROAD

Whiteboard

This is basically what I will do regarding building my game.

Execution / result

I helped get an idea on what our main setting would be.

Completed

true

reportB

execution

After brainstorming various ideas I came to the conclusion that our game setting would be an abandoned military base on a island that had failed experiments take over.

tests

We built an overview 2D esc view that constantly is over our protagonist as he moves through the map.

handoff

After adding everything onto my github I can say that all pdfs and boards images are on there as well as being organized.

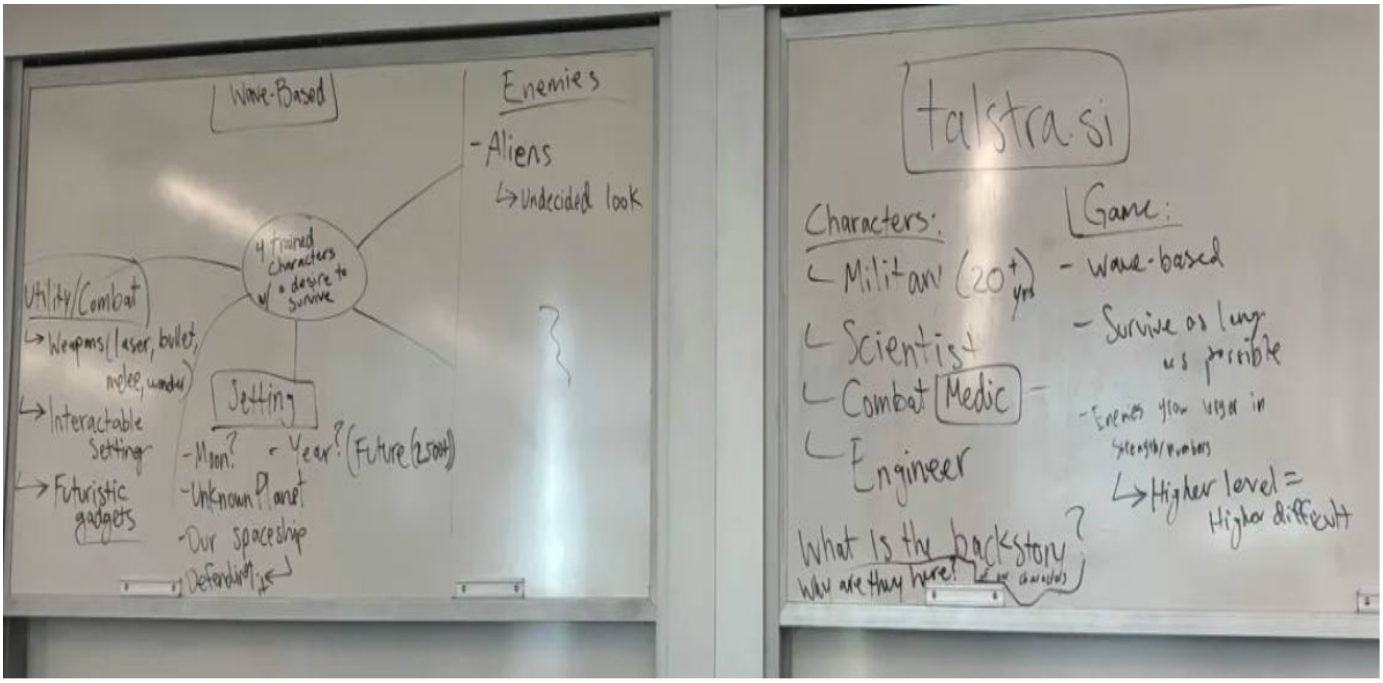

reflection

After creating the foundation of what our game is meant to be, the next step is to find tune the visuals. Having better visuals creates a more captivating scene/environment which guides the user to consume the game at a higher volume than the average game.

Whiteboard

This is where we are at when asked about some of our decisions and open questions surrounding our project.
