CS110 / INDEPENDENCE ROAD

reportB / Jesse Sanchez

Issued: Nov 12, 2026, 3:16 PM Pacific

Record: FORM-3380D5AB404B2B216C2B32AA

Personal public verification code: VIEW-6251F303836BFC8A91BF2310

Include your own public code with every assignment, even in a team folder. Never submit your private recovery key.

SHA-256: 97e8967b8215e4030751daea78821772cd63e5292c6653f7568b7b81e93c9637

Verify the record number at courses.addp2p.com/development-road/independence/index.html?view=verify

An issued record preserves submitted information. It is not a grade or proof of comprehension.

What did you personally execute? Connect completed tasks to files/commits.

After brainstorming various ideas I came to the conclusion that our game setting would be an abandoned military base on a island that had failed experiments take over.

Record setup/import checks, project opens/runs, player configuration/result, and one failure fix retest. Separate observed results from predictions.

We built an overview 2D esc view that constantly is over our protagonist as he moves through the map.

Personal GitHub URL/commit, team link if used, project/source paths, PDFs, boards/images, credits and reproduction instructions.

After adding everything onto my github I can say that all pdfs and boards images are on there as well as being organized.

Compare the result with the mission. What did you verify, what remains, and what should the team do next?

After creating the foundation of what our game is meant to be, the next step is to find tune the visuals. Having better visuals creates a more captivating scene/environment which guides the user to consume the game at a higher volume than the average game.

Execution / result

I helped get an idea on what our main setting would be.

reviewedPlan

mission

A 2-D wave-based game with escalating difficulty as the rounds progress. Online/offline, up to 4 players total.

The main goal is to see how far you can get until the enemies overwhelm you and defeat you.

framework

P2P can be advantageous in the development by guiding us to the end point of where our team wants the game to stand. There is not much of a story to derive from this type of game, as opposed to other single-player, story mode games, but an underlying story to the characters can help immersify the fans.

Pipeline to get the story to become a reality. Design and being creative with the characters, story, enemies, and weapons should be a main focus.

tech

Definitely will be using Unity, and even moreso a 2-D template as the foundation. C# with all its variables and functions.

Time code

Classes & components

Class | Responsibility | GameObject

EnemyAI | Determines movement/attack | enemy character/icon

playercontroller | how the user moves and attacks | player character/icon

scoremanager | points tracker to purchase/upgrade | scoreboard on side tallying points

functions

funtion | inputs -> result | when called

player movement | WASD/controller joystick | player moves as intended

Variables / properties

Name : type | Value / purpose | Used by

weapons | multitude of variety with different damage | only the user

communication

reuse

The whiteboard, storyboarding process can be a concept that is easily transferable across projects and different stories. Understanding every element of the story is what builds and drives the foundation. It guides where the story will and should end.

boardNotes

Black Ops Zombies arcade was the main inspiration for the game. Different enemies, characters, stories and whatnot, but a 2-d wave-based game that increasing in difficulty. The remaining questions revolve around ui and design; what the enemies and characters may look like

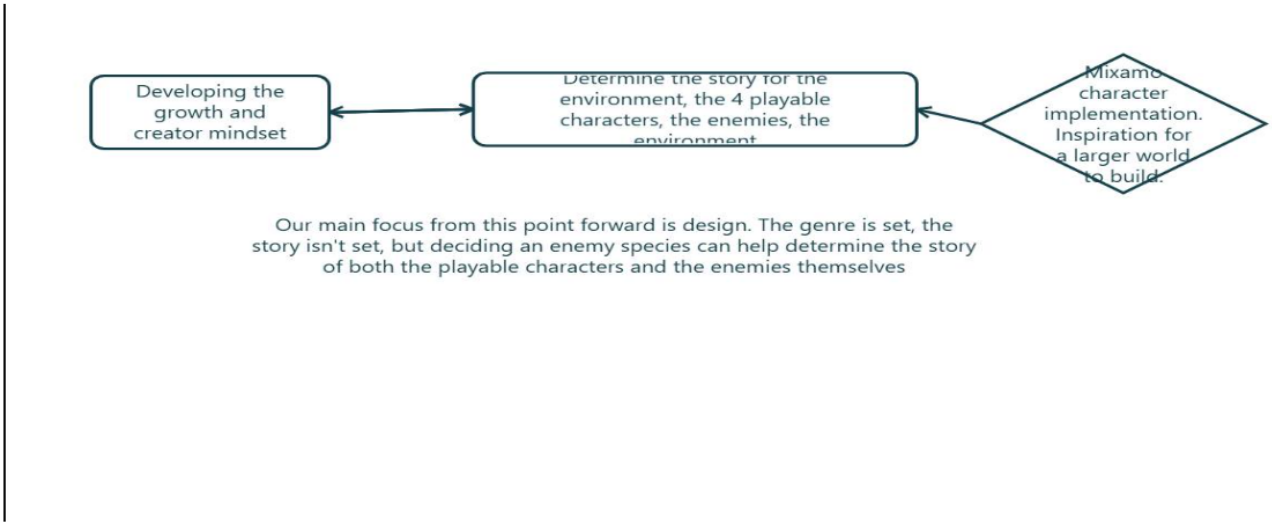

Whiteboard

Focus on design and the story of our characters.

Why are they fighting to survive in this world?

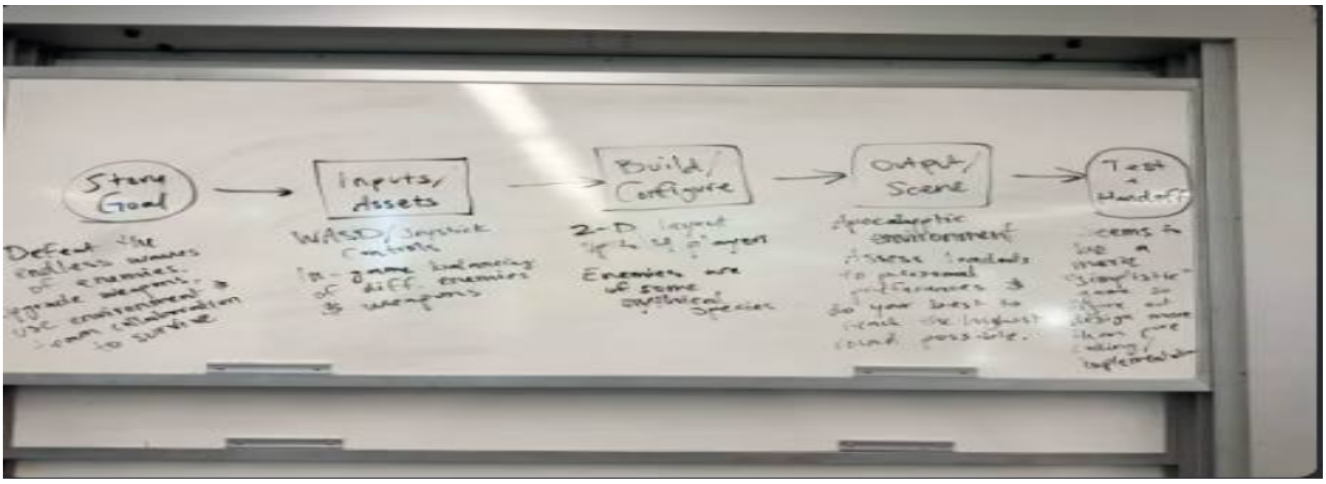

CS110 / INDEPENDENCE ROAD

Where even is this world and who the heck are these enemies?

Whiteboard

Pipeline to get the story to become a reality. Design and being creative with the characters, story, enemies, and weapons should be a main focus.
